where hot water can be obtained.

(57) Abstract

COPYRIGHT: (C)1998,JPO

**PROBLEM TO BE SOLVED:** To facilitate nostril washing by connecting a balloon or a cock connected to a washing bag to a cylindrical part of a nostril cock member, one end of which is a spherical part, and the other end of which is a cylindrical part.

**SOLUTION:** A nostril cock member 1 is so constructed that a spherical part 2 is formed on one end, a cylindrical part 3 is formed on the other and a flange part 4 is provided on the end part of the cylindrical part 3. A balloon 5 formed on an elastic material such as rubber, material or the like is fitted to the flange part 4. The balloon 5 is filled with washing liquid. It is possible to use a cock to which a washing bag is connected instead of the balloon 5. At the time of using the device, first the balloon 5 is filled with hot water to be swollen to a size of a grapefruit. The balloon 5 is fitted to the flange part 4 of the nostril cock member 1. The spherical part 2 of the nostril cock member 1 is inserted in a nostril, and the balloon 5 is pushed to pour washing water into the nostril, thus washing it. Thus, the device can be used simply and in any place
